

Ecocylinder Office Rental

September 2020

Welcome to POSTWINK!

POSTWINK RECYCLING SOLUTIONS helps set up effective recycling initiatives and promotes a recycling culture. We do this by distributing quality recycling containers and bins (most of which are locally made), together with educational material, training and other complimentary products and services: from recycling bags to composting bins and Bokashi.

Our focus is on waste separation at source. We believe that when one has the right recycling bin (which can be used to keep food waste separately for composting too), you do not just eliminate cross-contamination and improve your recycling rate, you also teach your staff and other stakeholders about Sustainability-thinking. Hence, our products and services not only make your recycling easy and improve your recycling rates – they actually educate so we all recycle better and contribute towards a circular economy!

With effect from September 2020, Postwink is happy to announce that you can now apply to rent your very own family of Ecocylinders to help you recycle at your offices*!

We look forward to hearing from you,

Yours in Recycling,

Berenice and the rest of the Postwink team,

 **Postwink's Mission:** Using quality products and outstanding service, Postwink strives to ensure that our Clients recycle the most effectively they can – hence making a difference to the environment, while helping our Clients' stakeholders understand and appreciate "Sustainability" thinking- whether in South Africa or beyond our borders.

*Ask us for an application today at info@postwink.co.za. Terms & conditions apply.

What are the Benefits of Renting

Renting your Recycling Bins means that you pay a monthly fee for using the recycling bins at your premises. This fee is determined from the outset, so there are no surprises and you can budget accordingly. Once the contract period ends, you can decide to renew or upgrade your bins – or send them back. Renting Ecocylinders makes sense for companies which want to trial a waste separation system over 12 months, or for those companies that embrace a circular economy which favours the rental model, rather than outright purchase.

So what are some of the benefits of renting your recycling bins?

- ✓ NO DEPOSITS and lower monthly costs
- ✓ Renting frees up your working capital to invest in other investments
- ✓ Once the contract expires, you have the option to renew, upgrade your bins or send back the units.
- ✓ VAT is paid on the monthly rent, and not up front – which is best for your cash flow.
- ✓ Rentals are fully tax-deductible from your annual taxable profit.
- ✓ Renting equipment does not affect your credit line facility or borrowing power as renting your bins becomes an “off the balance sheet” item.
- ✓ Renting recycling bins gives you the flexibility to replace or discontinue using the Ecocylinders at the end of the contract period, if you find that these do not work for your workplace.

In short, by renting your Ecocylinders, you have the opportunity to reduce your operational costs, free up working capital, improve your cash flow AND have the flexibility to replace old bins with new ones if you so wish to at the end of the period!

Why Ecocylinders?

Postwink has been manufacturing and distributing Ecocylinders since 2009. These have become one of our bestselling recycling bins. They are versatile, sturdy, recognizable (making it easier to educate staff with) and they look at home in a wide range of interior design settings and buildings.

Which Ecocylinder™ is right for you?

Ecocylinders are suitable to separate your waste for recycling, your food scraps for composting or even to store batteries and small e-waste in between collections. We also have a Coffee Ecocylinder which splits the coffee cups, lids and left-over liquid, so the cups can be more easily recycled and the liquid handled separately.

Prices quoted are per unit per month, over a 12-month period. Prices exclude VAT & first delivery – include lid branding. No deposits required. Terms and Conditions apply.

1-waste - R69 per unit pm

2-waste - R105 per unit pm

3-waste - R115 per unit pm

1-waste Ecocylinders - R69 per unit pm

Composting Ecocylinder - R95 per unit pm

Battery Ecocylinder - R79 per unit pm

Coffee Ecocylinder (3 partitions) - R125 per unit pm
